Working with a Grid View

A **grid** is a table that displays items the user is authorized to view, following a predefined layout. Each row represents a single item, and the grid provides key details for quick reference.

To perform actions on multiple items, select them using the checkboxes. From there, you can add the selected items to a group (e.g., Accounts), export them, or delete a specific item.

	FULL NAME	TAX ID	AGE	CASH & CASH EQUIVALENTS	AUM	OPEN ACCOUNTS	EMAIL
☐	Fausto Bergnaum		60	\$2,272,337,052.73	\$6,817,011,158.20	1	Rod.Stiedemann2@yahoo.com

How to work with Search

There are 2 types of search available in grid-view: Basic and Advanced.

Basic Search

Basic Search lets you quickly find specific accounts by entering details like the account name or account number directly into the search bar.

ACCOUNTS

Accounts

Powered by invent

See the specific modules for more details on which entities the basic search is performed on.

Advanced Search

The Advanced Search lets you create detailed searches using Query Language for precise results. **Do not use any other constructions.**

Here's how it works:

- **Switch Modes:** You can easily toggle between Basic and Advanced search; your Advanced search will stay saved even if you switch modes.
- **Choose Parameters:** Click on the search bar to see a list of search options. You can type or select them from a dropdown.
- **Date and Formatting Help:** Get date hints (e.g., "mm/dd/yyyy") and feedback if your query contains an error.
- **Auto-Suggestions:** Type to see matching options instantly.

- **Operators:** Use "AND" to combine conditions for flexible, powerful searches.

Advanced Search is designed to make finding data easy, even with complex criteria.
